SAT PakTools

The SAT workflow begins with PakTools

powered by SAT *Smart Acquisition Technology™*

NL Technology announces PakTools, the tool to " begin with the end in mind".

Everyone knows if you begin with the end in mind you become more streamline, consistent and predictable with your results.

PakTools is the tool to use to begin the SAT process, by starting clean and organized your FieldPak media becomes your digital project vault. Get everything ready before you begin shooting; provide a logical framework in the non linear video workflow.

With SAT, all non linear acquisition is ready for what every comes in a instant, being retro-looping for a special event or capturing those 1 to 2 second action shoot back to back.

Features:

- Supports FieldPak, USB memory devices 256KB and larger
- Format FieldPaks or USB memory devices, so you can begin with fresh, known and good media
- Name the media a meaningful title for easy to track and locate storage
- Create Avid ready projects – OMF or MXF
- Bin Creation – get organized with bins for your video shoots
- Metadata interface, create and manage your acquisition metadata
- Auto-detects insertion of FieldPak or USB memory devices

PakTools

- Format FieldPaks
- Format USB storage devices
- Create Projects
- Create Bins
- Create Metadata

Get the most from your smart acquisition technology workflow: Cleanup, prepare and reuse with SAT PakTools
